ZAMBELLI SIDING

FACADES WITH CLARITY.

Clean lines, precise execution, lasting performance. Zambelli Siding stands for concealed-fastened metal facade elements made of aluminum or steel. The elements are manufactured to exact dimensions and ensure clean, uniform facade appearances without visible fasteners. The result: facade solutions that perfectly combine function and form.

- ✓ Concealed fastening elements
- ✓ Wide range of colors and surface finishes
- ✓ Custom-fabricated from aluminum, steel or other metals
- ✓ Horizontal, vertical or diagonal installation

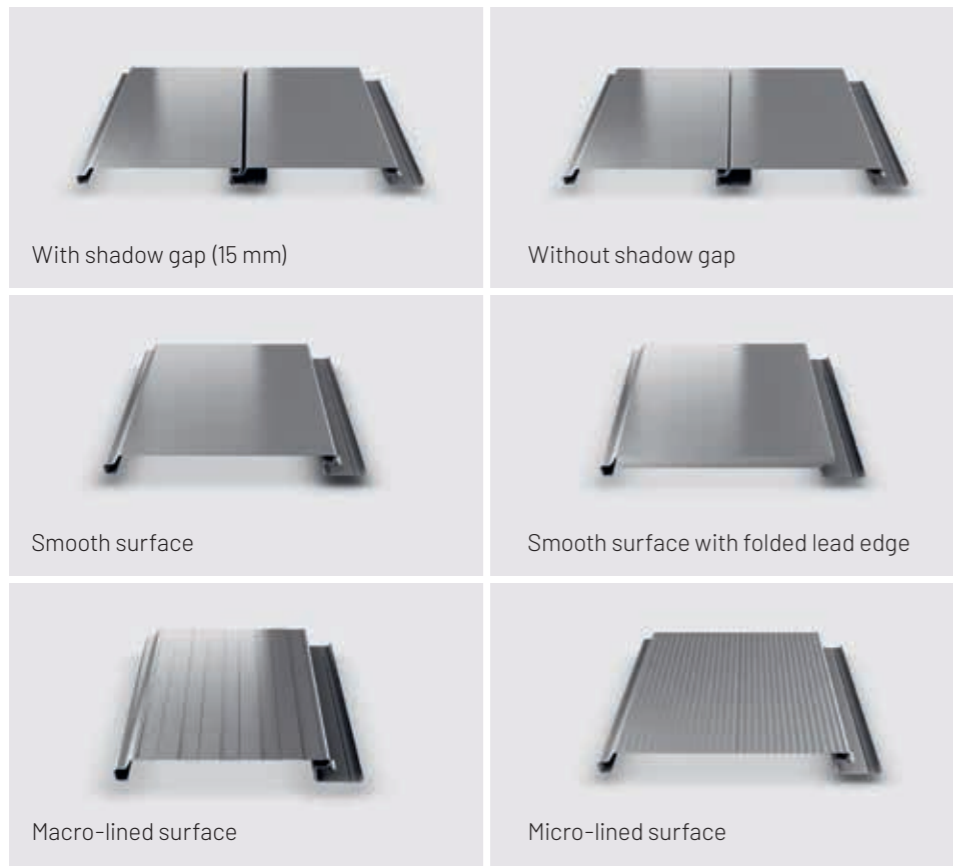

PRECISION METAL FACADES.

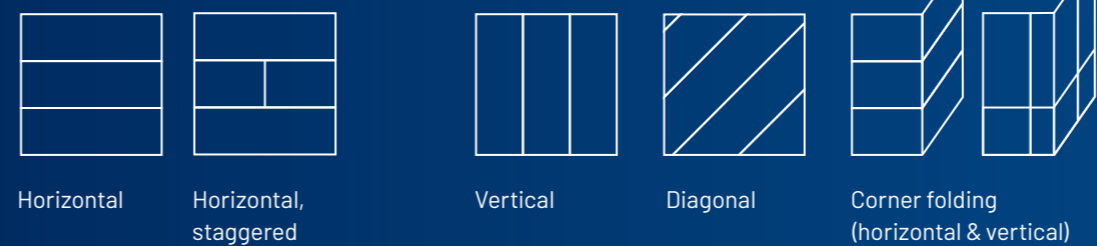

Zambelli Siding combines engineering and architecture to create clean, uniform facade designs. The panels are manufactured specifically for each project and securely fixed with concealed clips – without penetrations and visible fasteners. Installation is compatible with all common metal or timber substructures.

Developed for ventilated rainscreen facades, the system offers variable panel widths and complete freedom in material, surface finish, and color selection. Whether new build or refurbishment: installation is precise, stress-free, and low-noise – horizontal, vertical, diagonal, or around corners. The elements can also be dismantled non-destructively and reused, supporting sustainable construction practices. The result: metal facade solutions that perform reliably over the long term and are structurally well engineered.

POSSIBLE PANEL DESIGNS

INSTALLATION OPTIONS

COLOR. SURFACE. METAL.

Design certainty for architecture with character. Whether aluminum, steel, or special metals, Zambelli Siding opens up the full spectrum of modern metal solutions and color options. A wide range of colors and surface finishes is available. Please contact us for details.

CUSTOM MANUFACTURING

Variable panel widths and project-specific lengths. Free choice of material, surface finish, and color. Additional finishes and perforations are available on request.

APPLICATIONS

Suitable for wall and ceiling cladding in both interior and exterior applications. Installed on a level, correctly aligned substructure made of metal or wood. Developed for ventilated rainscreen facades (VHF) with a clear structural separation between the load-bearing structure and the facade.

SIDING CLIP

The Zambelli Siding Clip allows for stress-free, low-noise linear expansion. Fastening is carried out without penetrating the surface, allowing for fast and efficient installation.

PRODUCT DETAILS & SPECIFICATIONS

Standard material	Aluminum; other metals available on request	Recommended maximum length	6,000 mm
Material thickness	1.2 - 1.5 mm (aluminum)	Surface finish / gloss level	15 - 30% (matte); others on request
Standard panel widths	200 - 500 mm	Panel ends	Closed (folded edge)
Profile depth	25 mm	Designed in accordance with applicable standards and structurally verified	

METAL EXPERTISE WITH RESPONSIBILITY.

At Zambelli, sustainability is a lived commitment. Manufacturing takes place in Germany under DIN EN ISO 14001 and within the Bavarian Environmental Pact. In 2025, Zambelli was awarded the Bavarian State Medal in Gold for its commitment to protect the environment.

- ✓ Listed in the DGNB Navigator: verified material data for reliable, well-documented decisions.
- ✓ Zambelli Siding allows for non-destructive dismantling - ideal for refurbishments and building extensions.
- ✓ Cost-efficient manufacturing process through roll forming.
- ✓ Zambelli Siding is made from durable metals that are almost entirely recyclable.

Let's start your project together - efficiently, safely, and sustainably.
